

WHAT IS CLAIMED IS:

1. A goggle comprising a body having two lenses, two sealing members respectively bonded to said body and closely attachable to the skin of the user's face, and a headband adapted to fasten said body to the user's head;

5 wherein said body comprises two integrated frames respectively extended around said lenses, and two lugs respectively outwardly extended from said frames for the mounting of said headband, said frames each having a smoothly curved inner edge fitting the curvature of human face around the eyes, and a stepped inner section; said sealing members are directly molded from a
10 compound rubber on said body, each having two annular flanges respectively bonded to inner and outer surfaces of said frames, said outer annular flange being bonded to an outer surface of the stepped inner section of the corresponding frame and disposed in flush with an outer surface of the corresponding frame.

15 2. The goggle as claimed in claim 1, wherein said compound rubber is composed of a thermoplastic rubber and a bonding agent.
